Let's Start!

A Great Way to Summarize the Information!

Learning Outcome:

Identify key information about people's jobs and places of work in spoken or written contexts.
Identify and recognize information related to concepts about graphic design related to IT.

Can Do Statements:

- I can talk about the concept of information design.
- I can explain the relationship between variables.
- I can talk about historical facts related to information design.

Ask your partner:

- Is it important to present information in an attractive way to viewers? Why?
- What is the purpose of using images or diagrams when presenting information? Are they necessary?

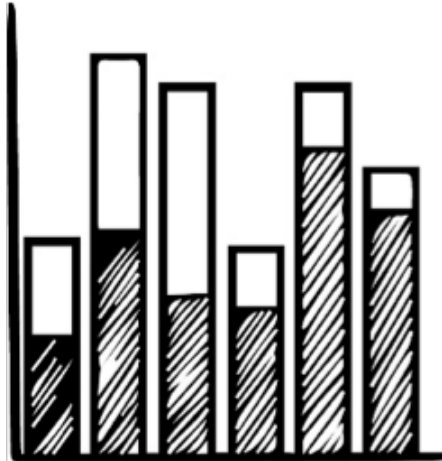

Let's Explore!

Two friends are talking about a diagram that doesn't make sense*!

*To "make sense" is to be coherent or clear.

Instructions: Read the text below.

Sally: I can't believe this. I'm trying to figure out this information, but it is complicated.

Jack: Wow, it looks like a very ineffective diagram. The information design is quite bad.

Sally: I know. Information design is concerned with making information easier to grasp.

Jack: Indeed. Did you know that maps and other diagrams are designed to help people understand large amounts of information?

Sally: Really? Do you know how they appeared?

Jack: Well, they appeared around the 19th century. The first diagrams were maps that helped people understand something, like variables that are related. For example, a map that shows how a country's borders have changed over time. In this case, we have the variables of time and size.

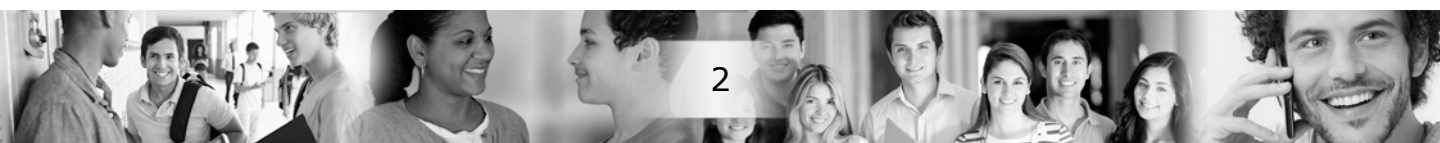

Sally: That's very interesting. What do you think I should do with this diagram?

Jack: Well, you can try to make it more effective than it is. Reorganize the information to make it clearer and more appealing. In fact, what do you need it for?

Sally: I need to prepare a presentation.

Jack: I see. In that case, you can make it simpler than it is already. Since you want to present the information, select and arrange it hierarchically making sure it is developed in a way that attracts people's attention, and finally, make sure you're using the right materials, size, etc. That's the way statistics are presented, so that people can get the information quickly and efficiently. And it is something that we have been doing for a long time, for example in traffic signs, labels, product manuals and banners.

Sally: Wow, I didn't know that information design is so generalized nowadays. Anyway, I will rearrange the information in a more effective diagram so that viewers can understand this complex information in a breeze.

**Let's Practice!**

It's very important to recognize the concept of information design.

Instructions: Underline all the correct answers.

1. What are the features of information design?
 - a. Information design is concerned with making information easier to grasp.
 - b. Information design is created to confuse people.
 - c. Maps and other diagrams are designed to help people understand large amounts of information.
 - d. Statistics are presented to attract people so they can get the information quickly and efficiently.

**Let's Practice!**

Some variables are clearer, better and more interesting to explain.

Instructions: Write the words to correctly complete the sentences. Use words from the box below.

size are more accurate / and variables easier to / will look more veracious
simpler variables like size and distance / more important

1. Sometimes the information is presented in a confusing way; information design is concerned with making information _____ grasp.
2. Variables like time and _____ now than some years ago.
3. The first diagrams were maps with _____ that were related to the explanation of the countries' borders.
4. If you rearrange the information in a more effective diagram, the variables _____ in the graphic.

Extension Activity

Let's present some information with clear variables.

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Look for information about information design.
- Write down the most important aspects about graphics and variables for information design.
- Create a graphic in a poster explaining the any topic.
- Share your graphic with the rest of the class.

Self-Assessment

Yes No

1. I search information about the concept of information design.

☐ ☐

2. I summarize important information related to information design.

☐ ☐

3. I create a graphic to present my favorite topic in class.

☐ ☐

4. I share and explain the graphic in class.

☐ ☐

Target Words

- **figure out** (phrasal verb) to understand or comprehend something
e.g. I'm trying to figure out this information, but it is complicated.
- **diagram** (noun) a figure or chart that summarizes some information
e.g. What do you think I should do with this diagram?
- **appealing** (adjective) attractive or nice-looking
e.g. Reorganize the information to make it clearer and more appealing.
- **arrange** (verb) to organize: to put in a specific order
e.g. Since you want to present the information, select and arrange it hierarchically.
- **in a breeze** (expression) easily, with no difficulty
e.g. I will rearrange the information in a more effective diagram so that viewers can understand this complex information in a breeze.

Learning Points

Comparatives.

You can use adjectives to compare nouns and say which one has a more developed quality than the other.

To use **comparatives**, you need to consider the length of the adjective you are going to use. Remember, you make comparisons between two nouns which share one quality, but one has a more developed level of that quality.

Short Adjectives

When you have *short adjectives* (which have one or two syllables), you add *er* at the end to make the comparative form.

Example:

*Diagrams are **easier** to read **than** long texts.*

Long Adjectives

For *long adjectives* (which have more than two syllables), you need to use the word *more* before the adjective.

Example:

*Maps are **more helpful than** spoken directions.*

In both cases, you use *than* to introduce the second noun in the comparison.

Examples

- *Information design is concerned with making information easier to grasp.*
- *Reorganize the information to make it clearer and more appealing.*

Learning Points

Simple Present of Verb to Be With Verbs in Past Participle.

You can use the *verb to be* in present to describe people or things. *Past participles* can be used as adjectives.

If you are describing one object, you use the form *is*. If you are talking about many objects, you use the form *are*. In addition, to create past participles, you can add *ed* to regular verbs, but irregular verbs have different changes.

Look at the following structure:

Subject + be (**am/is/are**) + verb in past participle form (-ed) + complement

Examples:

*Information design **is developed** to improve presentations.*

*Diagrams **are organized** to present concise information.*

Examples

- *I'm trying to figure out this information, but it is complicated.*
- *That's the way statistics are presented, so that people can get the information quickly and efficiently.*
