Let's Start!

Our customers' information is quite valuable!

Learning Outcome:

Identify key information about people's jobs and places of work in spoken or written contexts.

Build the IT system prototype, starting from the analysis of the functional characteristics of the system regarding user-friendliness, functionality and user experience, supported in software applied following design protocols.

Can Do Statements:

- I can explain how to create a customer profile.
- I can talk about different tools related to online channels.
- I can create a customer profile based on the data collected.

Ask your partner:

- Does an organization need to store information from its customers or clients? Why?
- How can you organize what you know about your customers using technology? Is that necessary?

Let's Explore!

This company's management team wants the import flows to be clear for the staff.

Instructions: Read the text below.

David: Well, Paul, in today's training you'll learn how to create a customer profile. Are you familiar with this kind of systems?

Paula: Yes. Though I think I've got to see if this one is different from the ones I used in my previous job.

David: All right. First of all. Remember that having customer profiles enables us to improve contact with them. We can also keep track of their interaction with our organization so we can provide them with the products or services they need, and also reach a broader audience.

Paula: Noted. How does your system work?

David: We have got some powerful online channels to gather information, like our own website, our email accounts, and our social media pages. The system puts that information together and places it on our servers. Then you can retrieve it by typing the customer's name or email in the platform. Then, all the information will be provided to you automatically.

Paula: Well, have you got any sort of example I can look at?

David: Sure. Let's create a profile, I'm going to use this training tools we have to show you how it works. The client's name is John Doe.

Paula: Okay. So, I'm typing it here. It's blank!

David: Some extra information will appear gradually, so you need to update it on the system.

Paula: I can see it now. We've got the person's email and the phone number, but we haven't got his address. It says that this customer always shops online. And now, I'm also getting the amount of times this person has interacted with us on the phone and on social networks. I'm creating the profile by completing the gaps on the customer's profile.

David: You see? It was very difficult before, but now it's a breeze!

Let's Practice!

David has some extra questions for Paul.

Instructions: Select the correct answer.

1. You should have got _____ in order to create the customer's profile.
 - a. the entire customer's information
 - b. customer's phone
 - c. customer's likes
 - d. customer's social networks
2. You've got all the online customer's information if you: (Hint: A synonym for examine)
 - a. send an e-mail to the customer asking all the questions.
 - b. call the customer and ask for all you need.
 - c. check the company's email, website and social media information.
 - d. go to the customer's house and ask them.
3. What should you do if you haven't got the entire customer's information through online channels?
 - a. Give up and understand you can't have all the information.
 - b. Start using the offline channels to find out more information.
- c. Send a lot of e-mails until the customer answers with the required information.
- d. Go to the customer's work place or house.
4. After you've got all the customer's information you have to:
 - a. use it in benefit of the company's marketing campaigns.
 - b. store it very well in a place of the company.
 - c. share that information with other companies.
 - d. sell that information to big corporations that work with personal data.
5. Having got a clear profile of the customers is important...
 - a. because it is good to get to know people well.
 - b. because information about preferences and opinions will help the marketing team of a business work better.
 - c. because customers are potential shareholders.
 - d. because stalking customers is the key to business success.

Let's Practice!

Steps to have a complete customer's profile.

Target Words

- **sort** (noun): type or kind of something
e.g. Have you got any sort of example I can look at?
- **social networks** (noun): websites in which people can interact with one another
e.g. And now I'm also getting the amount of times this person has interacted with us on the phone and social networks.
- **gap** (noun): blank space, hole or space to complete
e.g. I'm creating the profile by completing the gaps on the customer's profile.
- **be familiar with** (expression): to have knowledge or training in some field
e.g. Are you familiar with this kind of systems?
- **improve** (verb): to make something better or to enhance it
e.g. Remember that having customer profiles enables us to improve contact with them.
- **powerful** (adjective): very strong, capable or mighty
e.g. We have got some powerful online channels to gather information.

Learning Points

Have Got.

Have got means the same as **have**, but it is more informal. Use it when you want to express that something belongs to you, or to talk about the characteristics that something has.

In order to use **have got**, you need to take into account that the verb **have** changes depending on the person it follows:

I have

You have

He has

She has

It has

We have

They have

After **have**, you use **got**, which doesn't change. You can use **have got to** ask questions, for affirmative and negative sentences.

Examples:

- **Have you got** the file with the customer profile I asked you for?
- Yes, I have got it now!
- No, I haven't got it yet.

Examples

- *Though I think I've got to see if this one is different from the ones I used in my previous job.*
- *Have you got any sort of example I can look at?*

Learning Points

Customer Vs. Client.

Sometimes, business owners use these terms that look like synonyms to refer to people who make business deals with them. However, they are slightly different. People often use these two terms interchangeably, but the difference remains on what the person (client or customer) needs. Take a look at the following explanation:

Client

Clients are the people who need and pay for the services of a professional in any particular field. For example: private teachers, lawyers, accountants and so on.

Customer

On the other hand, customers are the people who buy things from businesses. Not necessarily from a person or group of people like clients would.

Examples

- *Remember that having customer profiles enables us to improve contact with them.*
- *We can also keep track of their interaction with our organization so that we can provide them with the products or services they need.*
