Let's Start!

Technology and the Environment: Friends or Foes?

Learning Outcome:

Identify key information about people's jobs and places of work in spoken or written contexts.
Identify and recognize information related to concepts about graphic design related to IT.

Can Do Statements:

- I can read about innovative options in the computing field.
- I can explain the concept of green PC by writing a short paragraph.
- I can write meaningful sentences to give information related to a specific topic.

Ask your partner:

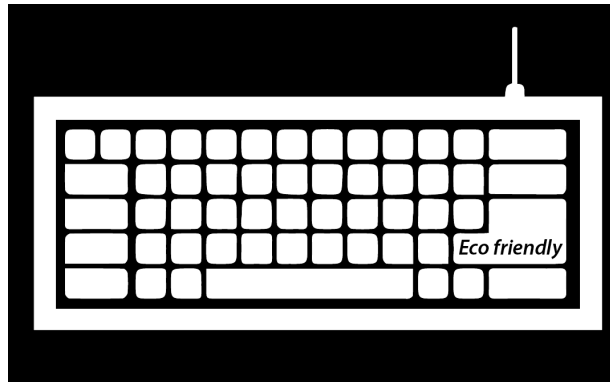

- How do you dispose of technology? Is it okay to mix it with regular waste? Explain.
- What natural resources are necessary to build computers and technological devices? How do you think they are obtained?

Let's Explore!

Researching on Environment and Technology.

Instructions: Read the text below.

Sue: I found this interesting article about some innovations in the computer field, which is related to the environment.

Joan: It could be helpful for our report on computers and energy consumption. We need to write something for our class!

Sue: I know! Let's read it to see if it can help us: *"Green PCs are the future of computing. They will not only be the most functional but also the most ecofriendly devices on the planet. Engineers are currently working to reduce pollution caused by technology. It can be difficult because all the processes, from the manufacture, the daily use and the disposal of hardware, take a toll on our planet."*

Joan: Wow, it may be convenient for our report! I'm writing some ideas. Keep going!

Sue: Okay.

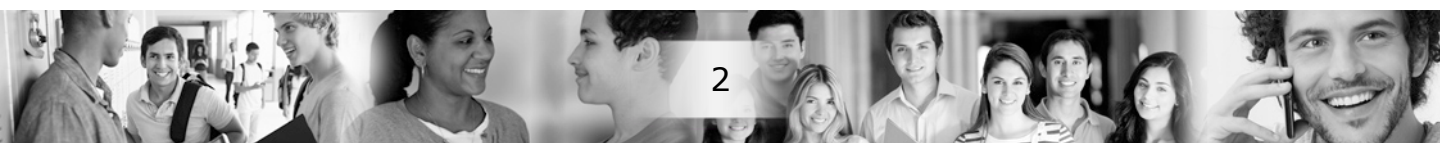

"The components of computer systems, like hardware, drives, screens, etc. have become less energy-draining over the last years, which has resulted in not only the lightest but also the most energy-efficient devices. However, the process of manufacturing and disposing of technology continues to be a big concern for the environment. Experts suggest that the manufacturing process be more compact and cleaner. This can be achieved by making smaller units, recycling products, and by reusing them as much as possible."

Joan: The recycling part may be expanded; it doesn't show enough details for our report. But I got some really meaningful sentences. Continue, please.

Sue: Let's see...

"Regarding the disposal of computer systems, users should be more responsible, especially since recycling is not only the cheapest but also the most effective way of stopping pollution. One of the major innovations of the field is the creation of devices that are easier to disassemble, so that their parts can be used again in others."

Joan: Great, we still need more sources, though.

Let's Practice!

Better computers for a greener planet!

Instructions: Organize the mystery sentence.

1. be / computers / helpful / on / report / energy / and / for / our / article / This / could / consumption.

2. by / difficult / technology. / pollution / to / avoid / be / caused / It / can

3. manufacturing / making / smaller / by / be / process / compact / easy / units. / A / to / achieve / may

4. more / issue / in / recycling / popular / should / companies. / be / technology / The

Let's Practice!

A green PC is not only the most appropriate tool for your company but also the most representative.

Instructions: Read the text and underline all the sentences with superlatives.

Energy consumption is one of the biggest issues for all companies. Currently, each company is turning into eco-friendly places that are implementing green PCs in their stations. Green PCs are not only the most convenient but also the most important change for the future of computing. We have new statements about the topic. For example, Green PCs are not only the most functional but also the most eco-friendly devices on the planet. Engineers are currently working to reduce pollution caused by technology but it could be a difficult process: the disposal of hardware. Green PCs are using not only the lightest but also the most energy-efficient devices. This is because some parts or devices are cheaper; however, the process of manufacturing Green PCs is not only the most innovative but also the most unconventional way to help the planet.

Extension Activity

I write my reports about pollution and technology.

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Find more information about Green PCs.
- Extract the main ideas about Green PCs and the main features.
- Write a 120-word text answering the question "What is the relationship among Green PCs, pollution and greenhouse effect?"
- Read your thoughts to your class.

Self-Assessment

Yes

No

- I look for additional information about Green PCs and their particular features. ☐ ☐
- I summarize information about Green PCs. ☐ ☐
- I create a short paragraph explaining my point of view about a particular topic and I share and read my work in class. ☐ ☐

Target Words

- **ecofriendly** (adjective): not harmful to the environment
e.g. They will not only be the most functional, but also the most ecofriendly devices on the planet.
- **disposal** (noun): the discarding, removal or dumping of something
e.g. It can be difficult because all the processes, from the manufacture, the daily use and the disposal of hardware.
- **energy-draining** (adjective): using a lot of electricity
e.g. The components of computer systems, like hardware, drives, screens, etc. have become less energy-draining over the last years.
- **major** (noun): the most important or main
e.g. One of the major innovations of the field is the creation of devices that are easier to disassemble.
- **disassemble** (verb): to take apart or separate into pieces
e.g. One of the major innovations of the field is the creation of devices that are easier to disassemble.
- **though** (adverb): but; although
e.g. Great, we still need more sources, though.

Learning Points

Superlatives and Not Only but Also (Long Adjectives).

You use **superlatives** to talk about a noun with more of a quality than the others of the same kind. **Not only but also** is used to mention a parallel or even an additional idea.

In order to form **superlatives** with short adjectives, you need to use the definite article **The**, and the adjective with the **-est** suffix.

Example:

*This is **the cheapest** computer in the market.*

With long adjectives (two or more syllables), you need to use **the most** and the adjective.

Example:

*Ecofriendly computers are **the most innovative** idea nowadays.*

The expression **not only... but also** is used in separate clauses. **But also...** provides an additional piece of information.

Examples:

*Technology is **not only** one of the most useful tools to men **but also** the most harmful for the environment.*

*Recycling technological materials is **not only** the most effective **but also** the most affordable way to reduce pollution.*

Examples

- *They will not only be the most functional but also the most ecofriendly devices on the planet.*
- *It has resulted in not only the lightest but also the most energy-efficient devices.*

Learning Points

Modal Verbs With Adjectives.

You can use **modal verbs** to express different shades of sense with other verbs. Additionally, you can use them with **adjectives** to describe people, things, or situations.

The most common modal verbs are **can**, **could**, **should**, and **may**. In order to introduce an **adjective** after the **modal verb**, you need to use the verb **to be** in base form (that is without **to**).

Examples:

Modern computing **can be harmful** to the environment.

Energy-saving devices **could be inexpensive** in the future.

Computer manufacturers **should be aware** of pollution.

Newer technologies **may be greener**.

Examples

- *It could be helpful for our report on computers and energy consumption.*
- *It can be difficult because all the processes, from the manufacture, the daily use and the disposal of hardware, take a toll on our planet.*
