Let's Start!

Customer knowledge is crucial to business success.

Learning Outcome:

Identify key information about people's jobs and places of work in spoken or written contexts.

Build the IT system prototype, starting from the analysis of the functional characteristics of the system regarding user-friendliness, functionality and user experience, supported in software applied following design protocols.

Can Do Statements:

- I can discuss the concept of customer relationship management.
- I can give precise information about customer relationship management.
- I can explain what to do to know your customers in a business.

Ask your partner:

- Is it important to divide responsibilities in the logistics industry? How?
- How can you optimize processes in the imports process of a company? Explain.

Let's Explore!

A trainee* is talking about his experience in CRM.

*A "trainee" is a new worker in a company, a person who receives training to perform his/her new job.

Instructions: Read the text below.

David: I'm glad to see that your grasp on concepts is on point. Now, let's move on to customer relationship management. What do you know about it?

Paul: Well, I know it's an essential part of any business. The purpose is to know well your customers to provide the products, services and contact they need. Another important aspect is that we can use some software that is devoted entirely to this. It's called a CRM tool.

David: How did your previous company use to manage that information?

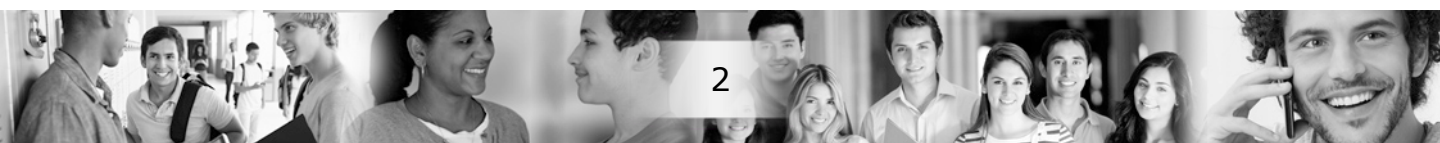

Paul: Well, they used to have a very complicated system before. It was a little unreliable as well, because it didn't keep track of all transactions, and we also experienced data loss sometimes. However, once they updated it, they divided the work on areas like sales, marketing and services. And each one of them outlined the most relevant information from the customers' profile, so we could interact with these categories to offer services or products based on their previous preferences and history.

David: Great. We have a cloud-based CRM software. Did your company have a similar one?

Paul: Well, they didn't use to store anything online until they updated the system. In fact, they used to keep physical files. The CRM system they got was also cloud-based, and made everything much easier.

David: Great to know! So, our system is quite robust. We not only use the information we collect to keep track of transactions, register interactions with customers, or offer new products. We want them to feel like we know them well, like a small shop owner would know his most loyal customers. Our goal is to retain the most loyal customers due to their profiles and, obviously, the benefits they obtain from our products.

Paul: Wow, I didn't know that.

**Let's Practice!**

Paul is talking about his previous job.

Instructions: Match the sentences from Column A with Column B. Read the sentences aloud. Check your pronunciation with your instructor.

COLUMN A

1. Paul used to
2. There, one teacher used to
3. One of his classmates didn't
4. Finally, in the lab, Paul

COLUMN B

- a. use to know a lot about CRM so Paul always mentioned that its purpose was to know customers well to provide them with the correct service or product.
- b. used to interact with different pieces of software that devoted entirely to CRM.
- c. mention how important CRM is for businesses.
- d. go to college to learn about CRM.

**Let's Practice!**

Paul is talking to a friend about his new job.

Instructions: Read the paragraph. Underline all the mistakes in the paragraph.

Yesterday at work I learned how to use the CRM software, it were great! Also my boss asked me about my previous experience with CRM. I tell him that we have a robust cloud-based CRM software, but that with it we loose valuable data and we were not able to retaining the most loyal customers of the company.

Extension Activity

Analytical CRM.

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Look for information about analytical CRM.
- Describe what analytical CRM is.
- Make a poster showing the importance of analytical CRM and its definition.
- Present your findings to your partners.

Self-Assessment

- I research information about analytical CRM.
- I can describe what analytical CR is.
- I make a poster about analytical CRM.
- I present my ideas to my partners.

Yes No

☐	☐
☐	☐
☐	☐
☐	☐

Target Words

- **data loss** (noun): the impossibility to retrieve or find data
e.g. It was a little unreliable as well, because it didn't keep track of all transactions, and we also experienced data loss sometimes.
- **cloud-based** (adjective): that can be stored on online services or the internet
e.g. The CRM system they got was also cloud-based, and made everything much easier.
- **loyal** (adjective): faithful towards someone or something
e.g. We want them to feel like we know them well, like a small shop owner would know his most loyal customers.
- **purpose** (noun): an objective, goal or aim
e.g. The purpose is to know well your customers to provide the products, services and contact they need.
- **devote** (verb): to dedicate or consecrate
e.g. Another important aspect is that we can use some software that is devoted entirely to this.
- **unreliable** (adjective): that can't be trusted; unstable or undependable
e.g. It was a little unreliable as well, because it didn't keep track of all transactions, and we also experienced data loss sometimes.

Learning Points

Simple Past (Review).

You use the **simple past** tense to talk about actions or events that started and finished in the past.

In order to use this tense, you need a subject and the past form of the verb. Don't forget that we have two different types of verbs, regular and irregular ones, and that each one of them has a different type conjugation.

Regular verbs only add a final "-ed" in order to conjugate them in the past form.

Examples:

*The CRM platform **completed** the operation successfully.*

*We **started** to learn about CRM.*

On the other hand, irregular verbs do not follow any specific rule as they can change independently.

Examples:

*The company **bought** a great CRM management tool.*

*They **felt** ready to implement a new CRM management tool.*

Now, keep in mind that for those types of verbs, the structure that we follow to write negative statements is always the same. We have to use the auxiliary verb "did"; plus, when we use it, we do not conjugate the action verb.

Examples:

*The CRM platform **didn't complete** the operation successfully.*

*The company **didn't buy** a great CRM management tool.*

Finally, you just have to move the position of the auxiliary verb to transform the sentence into an interrogative one. Furthermore, we can add a WH- word at the beginning to create open questions (whose answer is not yes/no).

Example:

***Did** the CRM platform **complete** the operation successfully?*

***What did** the company **decide** to buy?*

Examples

- *It was a little unreliable as well, because it didn't keep track of all transactions.*
- *However, once they updated it, they divided the work on areas like sales, marketing and services.*

Learning Points

Used to in Affirmative and Negative.

We use the expression **used to** to talk about past habits, actions that we regularly did in the past.

It is important to take into account that when we use the expression **used to** we are mentioning a recurrent action that took place in the past, but that does not take place in the present time. The structure that we follow to write affirmative sentences using this expression is:

Subject + **used to** + **verb in infinitive** + complement.

Example:

We **used to use** a very basic CRM management tool.

They **used to believe** that CRM was not an important part of a business.

When you want to write a negative statement using this expression, you have to be careful as the structure changes:

Subject + **did not (didn't)** + **use to*** + **verb in infinitive** + complement.

*Pay attention to the conjugation of **used to**. As we have the auxiliary verb **did** in its negative form, we do not conjugate the verb. That is why we write **use to**.

Examples:

We **didn't use to use** a very basic CRM management tool.

They **didn't use to believe** that CRM was an important part of a business.

Examples

- Well, they **used to have** a very complicated system before.
- Well, they **didn't use to store** anything online until they updated the system.
