### Let's Start!

IT and organizations need one another!

#### Learning Outcome:

Identify key information about people's jobs and places of work in spoken or written contexts.

Build the IT system prototype, starting from the analysis of the functional characteristics of the system regarding user-friendliness, functionality and user experience, supported in software applied following design protocols.

#### Can Do Statements:

- I can explain the relation between information systems and organizations.
- I can give detailed information related to Info systems and organizations.
- I can talk about the interaction between IT and organizations.

#### Ask your partner:

- What do you know about organizations and information technology? How are they related?
- Does the size of the company, as well as its type, influence information load? Explain.

## Let's Explore!

Two friends talk about organizations and information systems.

*Instructions: Read the text below.*

**Jack:** So, taking into account that we want to open our own business, we need to decide which organization type is the most suitable for us.

**Sally:** I reviewed the three main organization types: sole proprietorship, partnership, and corporations. The kind of organization we choose will influence the load of information that our IT team has to deal with.

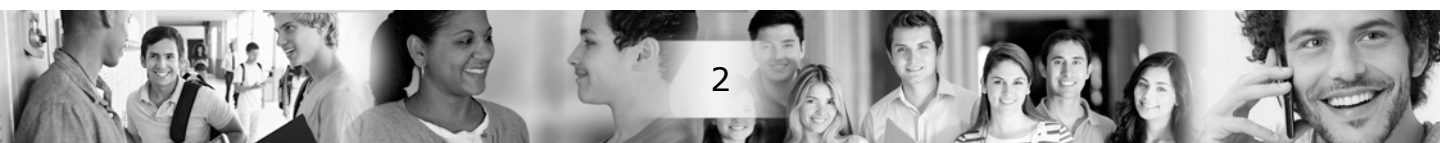

**Jack:** Indeed. If we select a simple type, like a sole proprietorship, the volume of information won't be too high. However, with a partnership, we could have more managers, and each of them could have their own system profile containing their business deals, records and so on. Information systems need to ensure that their information doesn't mix with ours or the clients', for example. In fact, the larger the organization, the more it produces data.

**Sally:** Well, there are also different kinds of systems, like customer relationship management, which can save our clients' transactions, allow our employees to interact with one another, and even enable remote work.

**Jack:** Great! I read something about business intelligence systems. They allow businesses or firms to make their decisions based on data analysis; they can make sales predictions and probabilities on different variables.

**Sally:** I see. I know that knowledge management systems allow organizations to retain information related to business practices and innovations. Imagine, my ideas can be preserved as well as yours, and then be shared with the entire team! It won't be an easy task to decide, then!

**Jack:** That's cool. We also need to think about the IT team; in order to organize it, we need people who are passionate about technology, have expertise in this field, can solve problems easily and can work in teams!

## Let's Practice!

Which company do you prefer?

*Instructions: Proofread the sentences. Correct the mistakes. Read the sentences aloud, compare your pronunciation to your partner's.*

1. Mine company is a sole proprietorship with a system that allows employees to remote work.
2. The new partnership we created was mine and her, and it had a customer relationship management system.
3. Ours company works with a business intelligence system that based decisions on data analysis.

## Let's Practice!

Let's go over the different kinds of systems.

*Instructions: Match column A with column B.*

### COLUMN A

1. Employees management
2. Customer relationship management
3. Business intelligence systems

### COLUMN B

- a. allows employees to interact with each other.
- b. permit business to make decisions based on data analysis.
- c. saves the information about the clients' transactions.

## Extension Activity

You need to know more about organizations and information technology.

*Instructions: Complete the following steps. Fill in the Self-Assessment.*

- Look for information about information systems.
- Describe the different systems you find.
- Make a list with the ones you can use in a corporation and their uses applying everything you learned in this lesson.
- Share your findings with a partner.

### Self-Assessment

Yes No

- I find information about information systems. ☐ ☐
- I describe information systems. ☐ ☐
- I list information systems I can use. ☐ ☐
- I share my findings with a partner. ☐ ☐

## Target Words

- **sole** (adjective): the only one; unique  
e.g. If we select a simple type, like a sole proprietorship, the volume of information won't be too high.
- **partnership** (noun): when two or more business partners create an organization  
e.g. However, with a partnership, we could have more managers, and each of them could have their own system profile containing their business deals, records and so on.
- **business deal** (noun): an agreement or business transaction  
e.g. However, with a partnership, we could have more managers, and each of them could have their own system profile containing their business deals, records and so on.
- **entire** (adjective): whole, full or complete  
e.g. Imagine, my ideas can be preserved as well as yours, and then be shared with the entire team!
- **passionate** (adjective): devoted to or enthusiastic about something  
e.g. We need people who are passionate about technology, have expertise in this field, can solve problems easily and can work in teams!
- **expertise** (noun): the amount of experience or skill in a field  
e.g. we need people who are passionate about technology, have expertise in this field, can solve problems easily and can work in teams!

## Learning Points

### Possessive Adjectives vs. Possessive Pronouns.

You use possessives to talk about an object that belongs to you or other people.

We use possessive adjectives to talk about something that belongs to someone. As they are adjectives, you must use them before the object.

Examples:

**My** organization can benefit from your guidance.

**Our** team of managers were in charge of sales strategies.

You use possessive pronouns when you have already mentioned the object that is owned, and you don't need to repeat it. As you already know, pronouns replace nouns to avoid unnecessary repetitions.

Examples:

Your firm has progressed just as much as **ours**.

Her business influence is far stronger than **mine**.

As you could see in the examples above, **possessive adjectives** have a different position within sentences when compared to **possessive pronouns**. Possessive adjectives go right before the noun they are modifying, but **possessive pronouns** can go either at the end of the sentence or at the beginning when answering a question, for example.

These are **my** books.

These books are **mine**.

- Are these your books?

- No, **mine** are these ones.

Remember that none of these words have apostrophes.

In the chart below, you will find both types of possessives:

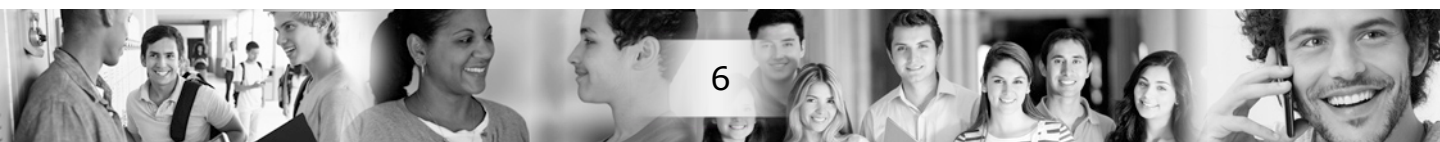

## Learning Points

| Personal Pronoun | Possessive adjective | Possessive pronoun |
|------------------|----------------------|--------------------|
| I                | My                   | Mine               |
| he               | Your                 | Yours              |
| she              | His                  | His                |
| it               | Her                  | Hers               |
| you              | Its                  | Its                |
| we               | Our                  | Ours               |
| they             | Their                | Theirs             |

## Examples

- *Information systems need to ensure that their information isn't mixed with ours, or the clients', for example.*
- *Imagine, my ideas can be preserved as well as yours, and then be shared with the entire team!*

## Learning Points

### Types of Organizations in Business.

In order to determine what kind of organization is more convenient for you or your business partners, it is essential that you review the different options you have, as well as their pros and cons.

Here you will find some of the most common types of business organizations, including their characteristics and some of the advantages and disadvantages.

#### Sole Proprietorship

It is usually established by one individual. It offers great flexibility, low cost management, and it is easy to dissolve. However, all responsibility lies in the owner, since this person represents the entire business. Additionally, it's harder to find funding.

#### Partnership

When two or more people decide to do business, it offers the possibility of creating a business and sharing responsibilities. It's easier to find business capital, and less taxes than corporations. However, there may be problems among partners and that could lead to conflicts or withdrawals. Also, liabilities are very strong.

#### Corporation

They're the most common kind of organization in the US. They have unlimited business life because partners can't dissolve it easily. Ownership can be transferred by selling stock and liability is limited to stock prices and not personal profit. On the other hand, they are closely monitored by the government, they also pay higher taxes and operational costs.

### Example

- *Speaking of organization types, there are three main types: sole proprietorship, partnership and corporations. The kind of organization we chose will influence the load of information our IT team will have to deal with.*
